

Problem Solving Question Taken from Internet :- (Nested-if else)

In this scenario,

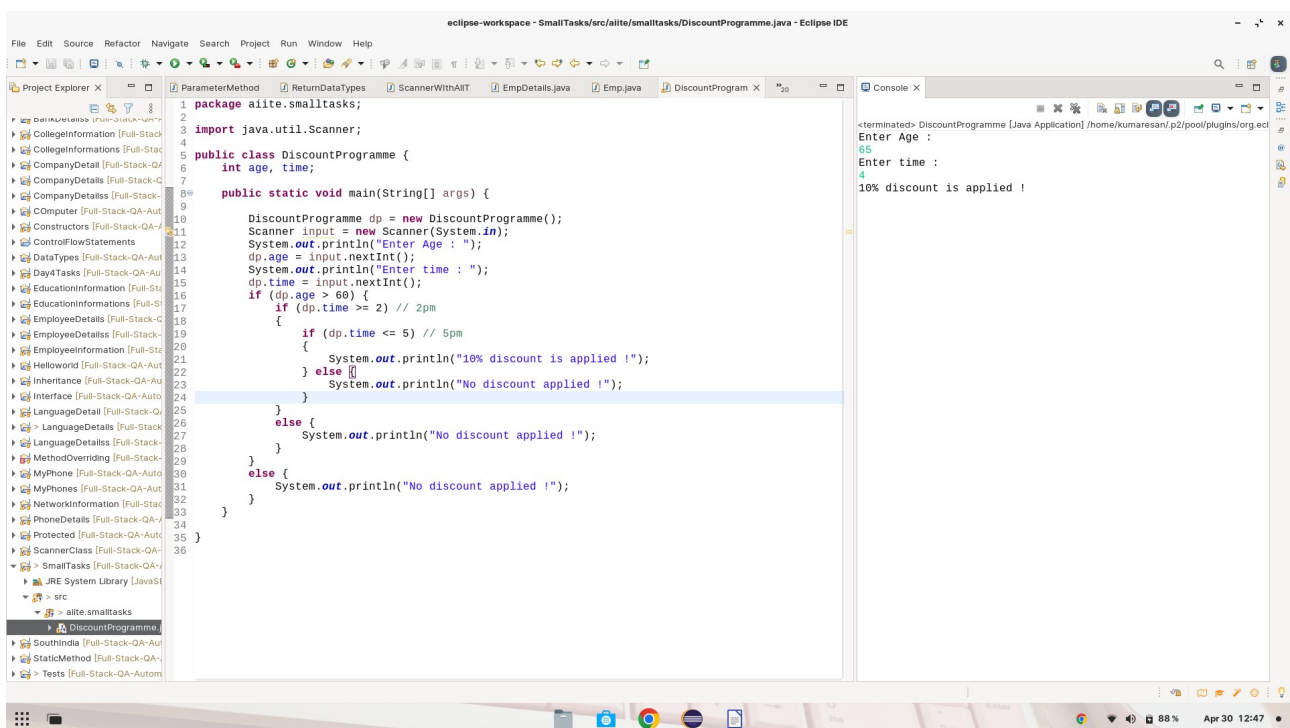

CASE 1 : the if statement checks if the customer is over 60 years old. If so, it checks if the visit time is between 2 pm and 5 pm. If **both conditions are met**, a 10% discount is applied.

CASE 2 : If not, no discount is applied.

Solution :-

CASE 1 : (both conditions are true) -

*** Age and Visiting time both are applied !**

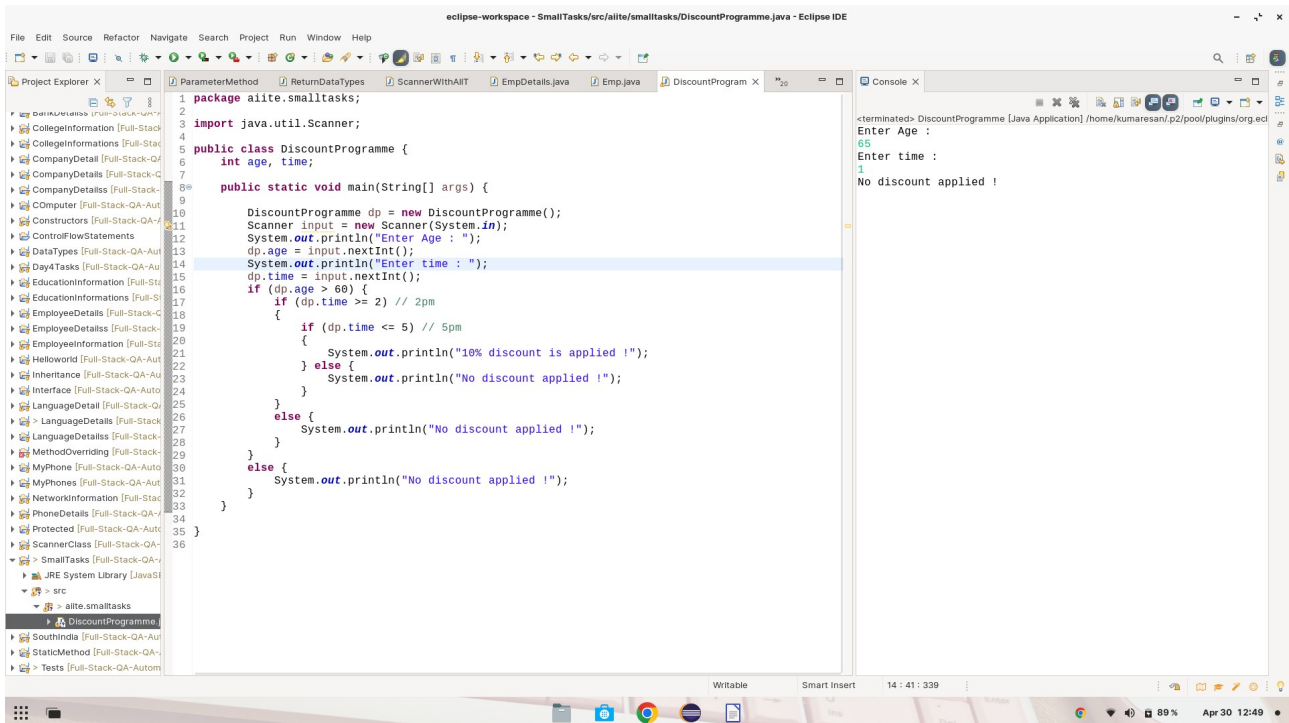

```
1 package aiite.smalltasks;
2
3 import java.util.Scanner;
4
5 public class DiscountProgramme {
6     int age, time;
7
8     public static void main(String[] args) {
9
10        DiscountProgramme dp = new DiscountProgramme();
11        Scanner input = new Scanner(System.in);
12        System.out.println("Enter Age : ");
13        dp.age = input.nextInt();
14        System.out.println("Enter time : ");
15        dp.time = input.nextInt();
16        if (dp.age > 60) {
17            if (dp.time >= 2) // 2pm
18            {
19                if (dp.time <= 5) // 5pm
20                {
21                    System.out.println("10% discount is applied !");
22                } else {
23                    System.out.println("No discount applied !");
24                }
25            }
26            else {
27                System.out.println("No discount applied !");
28            }
29        } else {
30            System.out.println("No discount applied !");
31        }
32    }
33 }
34
35 }
36 }
```

Console Output:

```
<terminated> DiscountProgramme [Java Application] /home/kumaresan/p2/pool/plugins/org.ed
Enter Age :
65
Enter time :
4
10% discount is applied !
```

CASE 1 : (one condition true another false) -

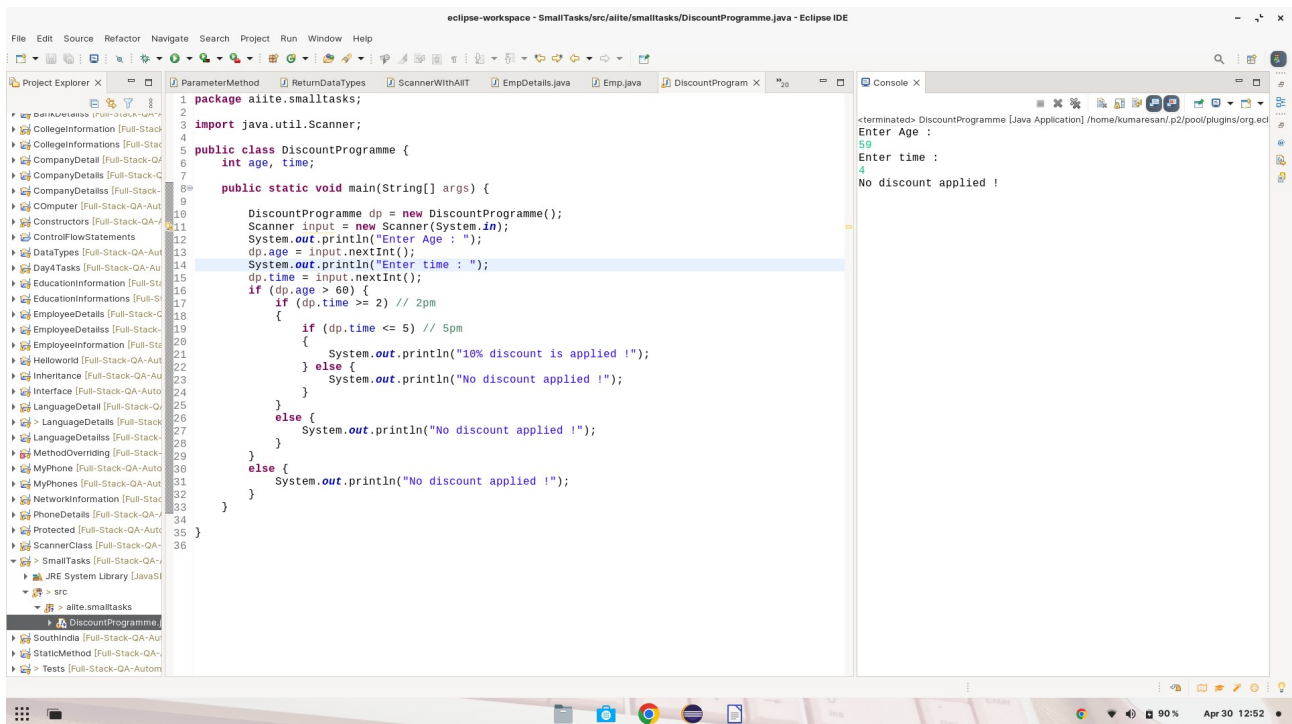

*** Age applied but visiting time not !**

```
1 package aiite.smalltasks;
2
3 import java.util.Scanner;
4
5 public class DiscountProgramme {
6     int age, time;
7
8     public static void main(String[] args) {
9
10        DiscountProgramme dp = new DiscountProgramme();
11        Scanner input = new Scanner(System.in);
12        System.out.println("Enter Age : ");
13        dp.age = input.nextInt();
14        System.out.println("Enter time : ");
15        dp.time = input.nextInt();
16        if (dp.age > 60) {
17            if (dp.time >= 2) // 2pm
18            {
19                if (dp.time <= 5) // 5pm
20                {
21                    System.out.println("10% discount is applied !");
22                } else {
23                    System.out.println("No discount applied !");
24                }
25            }
26            else {
27                System.out.println("No discount applied !");
28            }
29        }
30        else {
31            System.out.println("No discount applied !");
32        }
33    }
34 }
35
36
```

```
<terminated> DiscountProgramme [Java Application] /home/kumaresan/p2/pool/plugins/org.ed
Enter Age :
65
Enter time :
1
No discount applied !
```

*** Visiting time applied and age is not !**

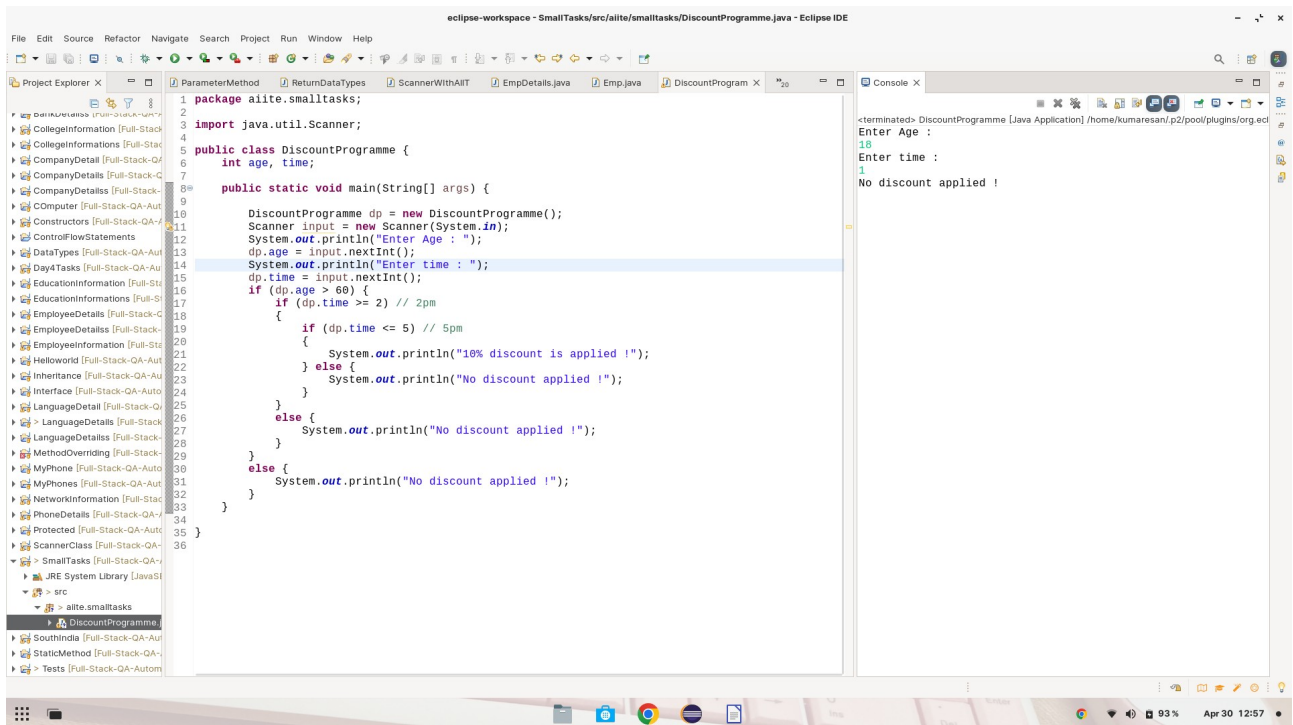

```
